# ANTIROLL®

## SUPERYACHT STABILIZERS

### The Sky's The Limit...

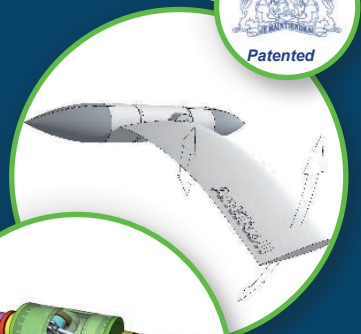

And now, thanks to AntiRoll, even at sea!

After a year and a half of secrecy and an even longer period of development, Dynamic Marine Systems (DMS) has conquered conventional stabilization with their cutting edge "AntiRoll".

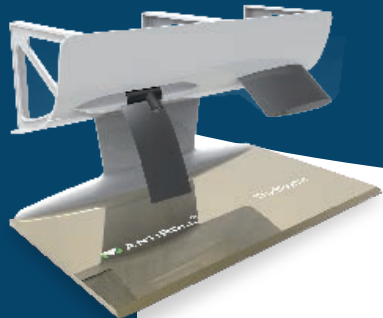

Super Stabilization is no longer the stumbling block for superyachts. On the contrary, the genie is out of the bottle: The patented AntiRoll system provides uncompromised performance at both Zero Speed and cruising with Dual Axis High Aspect Ratio Fins, and all with just one single system.

A revolutionary innovation in the best Dutch maritime tradition. Especially for fast motor yachts and also for - and this is unique - sail yachts.

The AntiRoll system provides safety and comfort based on technical ingenuity without the compromises that you experience with traditional systems.

- Patented
- Our system has Dual Axis High Aspect Ratio Fins
- Excellent performance at both Zero Speed and cruising in 1 single system
- No more compromises (as with traditional systems)
- Fins will always go through the centre of gravity (whilst sailing)
- Up to 75% less resistance (cruising)
- 2 to 3 times the lift capacity of conventional fins (zero speed)
- Fins are retractable (into hull recess)
- Carbon fins (optional)
- Ideal for fast motor yachts
- Suitable for sail yachts (unique)
- Hybrid drive system reducing power consumption (Power Train)
- CANbus communication system with touch screen and graphical user interface
- Reduced wiring and installation work
- Reduced weight
