DMS Holland to Develop Stabilisers for Fast Planing Yachts

DMS Holland has, in cooperation with Brabant Engineering, begun development of a roll damping system for fast-planing yachts up to 30m. The new AntiRoll damping system will be produced as a standard-series stabiliser, with its design based upon the patented dual-axis fin stabiliser. "With this new stabiliser, we want to create a new market for DMS Holland, namely that of fast-planing yachts. This market is considerably larger than that of the super- and mega yachts. Think of production series builders such as Fairline, Princess, Sunseeker, Gulf Craft, Ferretti, Jeanneau, etc. Soon, with our new system, one roll damping system on board will be enough without having to compromise on stability at different speeds," says DMS Holland's Patrick Noor.
